

TechoVerse

AI Powered Project Management Platform

Prepared By : Anantha Lakshmi

Company : Prodesk IT

Sprint : Sprint 13 - Capstone Phase

Track : Full Stack Development

Submission : _____

1. Project Overview

TechoVerse is an AI-powered project management platform designed to help software teams efficiently plan, organise, and track their projects from a single, centralised workspace. The application simplifies project management by providing intuitive tools for task creation, assignment, collaboration, scheduling, and progress monitoring.

The platform enables project managers to create projects, assign tasks to team members, monitor project status, and generate productivity reports. Team members can manage their assigned tasks, update progress, collaborate through comments, and receive notifications for important activities.

To enhance productivity, TechoVerse integrates an AI Assistant that provides intelligent task recommendations, sprint summaries, deadline reminders, workload analysis, and project insights. These AI-powered features help teams make better decisions, improve planning, and complete projects more efficiently.

The system follows a modern full-stack architecture using **Next.js** for the frontend, **Express.js** for the backend, **MongoDB** for data storage, and AI integration for intelligent project recommendations. The application is designed with a responsive user interface, making it accessible across desktop and mobile devices.

TechoVerse aims to improve collaboration, reduce manual project tracking, and provide a scalable solution suitable for startups, software development teams, and organizations managing multiple projects simultaneously.

Purpose of the Project

The primary purpose of TechoVerse is to provide a centralized platform where teams can efficiently manage projects, collaborate in real time, monitor task progress, and utilize AI-driven insights to improve productivity and project success.

Target Users

TechoVerse is designed for:

- Project Managers
- Software Developers
- UI/UX Designers
- QA Engineers
- Team Leads
- Startup Teams
- Small and Medium Businesses

Core Modules

The application consists of the following major modules:

- User Authentication (Login & Signup)
- Dashboard
- Project Management
- Kanban Board
- Task Details
- Team Members Management
- Calendar & Scheduling

- Reports & Analytics
- AI Assistant
- Notifications
- User Profile & Settings

Key Features

- Secure User Authentication
- Create and Manage Multiple Projects
- Assign Tasks to Team Members
- Drag-and-Drop Kanban Board
- Task Priority and Status Tracking
- Calendar-Based Deadline Management
- AI-Powered Task Suggestions
- Sprint Progress Monitoring
- Team Collaboration through Comments
- Real-Time Notifications
- Reports and Productivity Analytics
- User Profile Management
- Responsive Design for Desktop and Mobile

Technology Stack

Frontend

- Next.js
- React.js

- Tailwind CSS
- Axios

Backend

- Node.js
- Express.js

Database

- MongoDB

Authentication

- JWT (JSON Web Token)

AI Integration

- OpenAI API (or another AI service)

Deployment

- Vercel (Frontend)
- Render (Backend)
- MongoDB Atlas (Database)

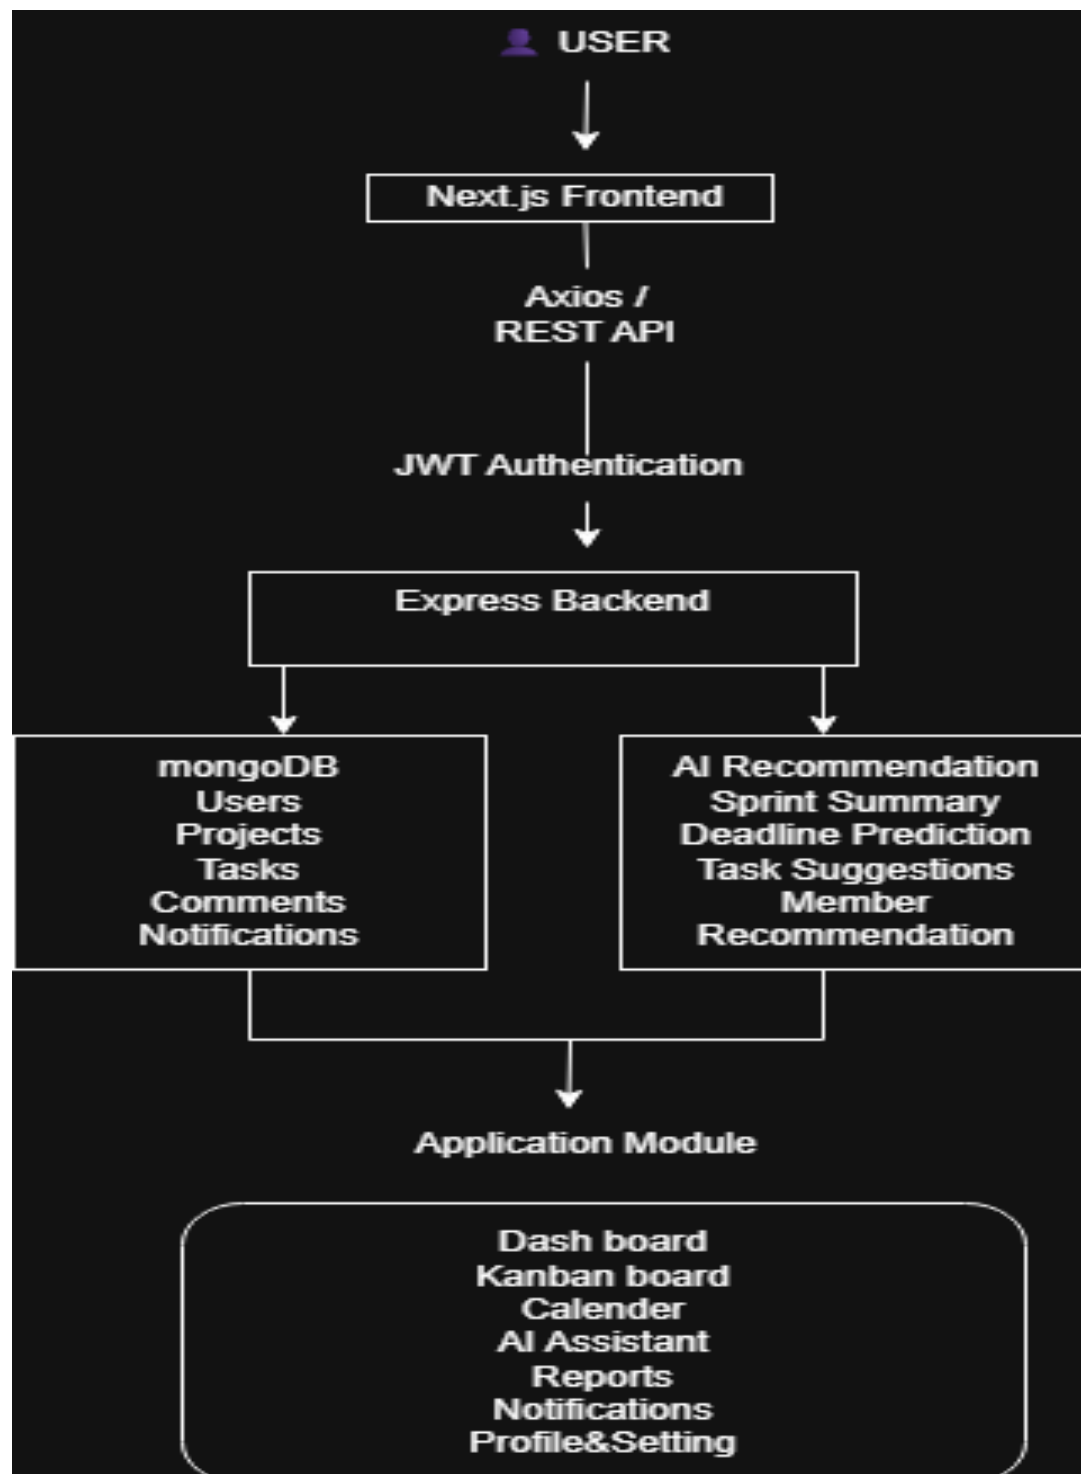

Project Goals

The main goals of TechoVerse are:

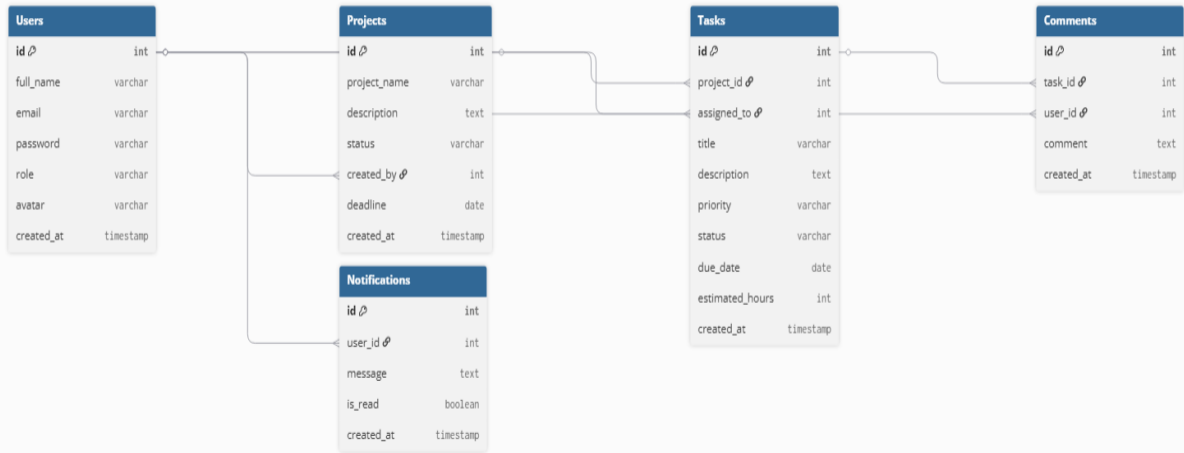

- Simplify project and task management.
- Improve collaboration among team members.
- Reduce manual effort using AI-powered automation.
- Track project progress through dashboards and analytics.
- Enhance productivity with smart recommendations and reminders.

- Provide a scalable and user-friendly platform suitable for modern software teams.
